Mies sought to establish his own particular architectural style that could represent modern times just as Classical and Gothic did for their own eras. He created his own twentieth-century architectural style, stated with extreme clarity and simplicity. His mature buildings made use of modern materials such as industrial steel and plate glass to define interior spaces, as also conducted by other modernist architects in the 1920s and 1930s such as Richard Neutra. Mies strove toward an architecture with a minimal framework of structural order balanced against the implied freedom of unobstructed free-flowing space. He called his buildings "skin and bones" architecture. He sought an objective approach in his work, emphasizing clarity and rationalism.

Работи в каменоделското ателие на баща си и в няколко локални дизайнерски фирми, преди да се премести в Берлин, където започва работа в бюрото на интериорния дизайнер Бруно Пол. Той завежда заедно с Валтер Гропиус и Корбюзие в ателието на Петер Беренс, където среща новите стилови идеи на прогресивната германска култура. Талантът му бързо е забелязан и скоро той започва да поема самостоятелни поръчки, въпреки формалната липса на съответното академично образование. По това време Мис се преименува, добавяйки по-впечатляващата фамилия на майка си – “ван дер Рое”. Частната му практика започва с проектирането на фамилни къщи за горните класове на германското общество. Проектите си изпълнява в изчистен неокласически стил в

Un problema aún mayor radica en que el planeta no tiene superficie sólida sobre la que aterrizar, ya que debido a su composición gaseosa, hay una suave transición desde su atmósfera y su fluido interior. Cualquier sonda espacial que descendiera por la atmósfera, sería finalmente destruida por la inmensa presión. Otro problema es la cantidad de radiación
