typedepot

Centrale Sans Rounded™

Designer

Alexander Nedelelev & Veronika Slavova

Release Year

Initial Release: 2010; Current Version 4.000: 2021

About

The newest member of our font household comes equipped with a smile - meet Centrale Sans Rounded!

Absorbing all the delicious ingredients from its older sibling Centrale Sans, this typeface features seven weights plus matching italics, an impressive x-height and a ton of OpenType features - case sensitive forms, ligatures, alternatives, tabular lining and more. The instantly recognizable characters are friendly but informal, bringing with them a sense of affection and sincerity.

Weights

Thin, Light, Regular, Medium, Bold, Xbold + Italic

Mies sought to establish his own particular architectural style that could represent modern times just as Classical and Gothic did for their own eras. He created his own twentieth-century architectural style, stated with extreme clarity and simplicity. His mature buildings made use of modern materials such as industrial steel and plate glass to define interior spaces, as also conducted by other modernist architects in the 1920s and 1930s such as Richard Neutra. Mies strove toward an architecture with a minimal framework of structural order balanced against the implied freedom of unobstructed free-flowing open space. He called his building "skin and bones" architecture. He sought an objective approach that would gu

Ο φαν ντερ Ρόε γεννήθηκε στο Άαχεν ηλικία δεκατεσσάρων ετών άρχισε να ασχολείται με την οικοδομική επιχείρηση του πατέρα του. Υστερα από φοίτηση δύο χρόνων σε εμπορική σχολή και μια περίοδο κατά την οποία σχεδίαζε γύψινες διακοσμήσεις, έκανε έναν οικοδόμο της περιοχής, άφησε την εργασία του στο Άαχεν και πήγε στο Βερολίνο. Το πατρικό επώνυμό του ήταν van der Rohe αλλά μετονομάστηκε σε "van der Roh" το οποίο ήταν το επώνυμο της μητέρας του, όταν πια ως διάσημος αρχιτέκτονας άρχισε να συνεργάζεται με την πολιτική ελίτ του Βερολίνου. Εργάστηκε από τότε στο Βερολίνο ως σχεδιαστής επίπλων και πλευρό του Μπουρνό Πόλ και από τότε άρχισε την αρχιτεκτονική του σταδιοδρομία ως μαθητευόμενος στο τεχνικό γραφείο

Работи в каменоделското ателие на баба си и в няколко локални дизайнерски работилници, преди да се премести в Берлин. Там започва работа в бюрото на интериорен дизайнер Бруно Пол. Той започва своя самостоятелна кариера, чиракувайки за помощник Валтер Гропиус и Корбузије в ателието на Петер Беренс, където се среща с новите стилски идеи на прогресивната германска култура. Талантът му бързо е забелязан и скоро той започва да поема самостоятелни поръчки, въпреки формалната липса на съответното академично образование. По това време Мис се преименува, докато по-впечатляващата фамилия на баба му си – „ван дер Роє“. Частната му практика започва с проектирането на фамилен дом за горните класови прослойки на германския народ.

Mies sought to establish his own particular architectural style that could represent modern times just as Classical and Gothic did for their own eras. He created his own twentieth-century architectural style, stated with extreme clarity and simplicity. His mature buildings made use of modern materials such as industrial steel and plate glass to define interior spaces, as also conducted by other modernist architects in the 1920s and 1930s such as Richard Neutra. Mies strove toward an architecture with a minimal framework of structural order balanced against the implied freedom

Ο φαν ντερ Ρόε γεννήθηκε στο Άαχεν. Σε ηλικία δεκατεσσάρων ετών άρχισε να δουλεύει στην οικοδομική επιχείρηση του πατέρα του. Ύστερα από φοίτηση δύο χρόνων σε εμπορική σχολή και μια περίοδο κατά την οποία σχεδίαζε γύψινες διακοσμήσεις για έναν οικισμό της περιοχής, άφησε το 1905 την γενέτειρά του το Άαχεν και πήγε στο Βερολίνο. Το πατρικό επώνυμό του Mies, αλλά μετονομάστηκε σε "van Rohe", το οποίο ήταν το επώνυμο της μητέρας του, όταν πια ως διάσημος αρχιτέκτονας άρχισε να συνεργάζεται με την πολιτιστική ελίτ του Βερολίνου. Εργάστηκε από το 1905 στο Βερολίνο ως σχεδιαστής επίπλων, στο πλευρό του Μπουρνό Πόλ και από το 1908 άρχισε

Работи в каменоделското ателие на Валтер Гропиус си и в няколко локални дизайнерски фирми, преди да се премести в Берлин. Там започва работа в бюрото на интериорен дизайнер Бруно Пол. Той започва своя професионалната си кариера, чиракувайки при Валтер Гропиус и Корбюзие в ателието на Петер Беренс, където се среща с новите стилски идеи на прогресивната германска култура. Талантът му бързо е забелязан и скоро той започва да поема самостоятелни поръчки, въпреки формалната липса на съответното академично образование. По това време Мис се преименува, давайки по-впечатляващата фамилия на мис си – „ван дер Роє“. Частната му професионална започва с проектирането на фасади и за горните класови прослойки на

Un problema aún mayor radica en que el planeta no tiene superficie sólida sobre la que aterrizar, ya que debido a su composición gaseosa, hay una suave transición desde su atmósfera y su fluido interior. Cualquier sonda espacial que descendiera por la atmósfera, sería finalmente destruida por la inmensa presión. Otro problema es la cantidad de radiación a la que es expuesta una sonda que llega al planeta, dadas las duras cargas de partículas del entorno alrededor de Júpiter. Por ejemplo, la sonda Galileo lo ha orbitado durante varios años y ha excedido notablemente la cantidad de radiación para la cual fue diseñada. Como resultado de ello, ha sufrido diversos problemas técnicos y fallos atribuidos a los efectos de la radiación.

Née le 8 mai 1910 à Atlanta, Mary Lou Williams grandit dans un milieu familial compliqué. Joshep Scruggs, son père, déjà marié et avec des enfants, a abandonné sa mère, Virginia Riser, qui élève seule Mary et sa sœur aînée. Peu de temps après être tombée enceinte, elle épouse Moses Winn, avec lequel elle divorcera peu de temps après². Mary porte donc le nom de Winn et restera persuadée que Moses est son père pendant plusieurs années³. Pauvre et alcoolique, obligée de passer toutes ses semaines chez des Blancs en tant que domestique, Virginia Riser s'occupe peu de ses enfants⁴. Mary passe donc beaucoup de temps avec son arrière-grand-mère Matilda Parker et sa grand-mère Anna Jane Riser.

Galileu Galilei desenvolveu os primeiros estudos sistemáticos do movimento uniformemente acelerado e do movimento do pêndulo. Descobriu a lei dos corpos e enunciou o princípio da inércia e o conceito de referencial inercial, ideias precursoras da mecânica newtoniana. Galileu melhorou significativamente o telescópio refrator e com ele descobriu as manchas solares, as montanhas da Lua, as fases de Vénus, quatro dos satélites de Júpiter, os anéis de Saturno, as estrelas da Via Láctea. Estas descobertas contribuíram decisivamente na defesa do heliocentrismo. Contudo a principal contribuição de Galileu foi para o método científico, pois a ciência assentava numa metodologia aristotélica.

Antilopka pižmová může mít jako druh různé, ale u každého jedince jednotné, zbarvení, jetž se pohybuje od šedé po kaštanovou. Směrem dolů barva bledne a spodek těla je pak již plně bílý. Suni patří mezi nejmenší druhy antilop, na výšku měří 33 až 35 cm a na délku asi 57 až 62 cm bez ocasu. Živí se převážně spadánými listy rostlin. Žije spíše samotářsky a vykazuje teritorialitu, své malé území si samci i samice hájí před jedinci stejného pohlaví, území samců a samic se však mohou překrývat. Rozmnožování může probíhat celoročně, samici se rodí obyčejně jedno mládě, jež schovává ve vysoké trávě. Jeho vývoj je rychlý a za tři dny již konzumuje pevnou stravu. Pohlavní dospělosti dosahuje za 6 až 18 měsíců.

Kondor D6 stanowił kolejną konstrukcję inżyniera Waltera Rethela, jaka powstała w zakładach Kondor Flugzeugwerke w Essen po modelach D1 i D2. W przeciwieństwie do poprzednich samolotów o konstrukcji drewnianej, kadłub D6 tworzyła kratownica z rurek stalowych, pokryta płótnem. Rewolucyjnym i niewystępującym w innych konstrukcjach pomysłem było także zastosowanie podziału górnego płata, który składał się z dwóch oddzielnych połówek, oddalonych od siebie o około 0,9 metra, zamocowanych do kadłuba i połączonych z płatem dolnym za pomocą rozchylonych na zewnątrz rozpórek i zastrzałów Całkowite usunięcie baldachimu miało na celu radykalną poprawę widoczności w przód i do góry.

В 1961 году художник совершил поездку в Италию, где изучал живопись эпохи Возрождения. Большое впечатление произвели на него работы Джотто и Паоло Уччелло. Работая над этой картиной, Жилинский впервые использовал новую для себя технику — темпера. Традиции техники темперной живописи по левкасу на древесно-стружечной плите восходят к византийскому и древнерусскому искусству, частично — к произведениям старых европейских мастеров. Техника масляной живописи перестала отвечать намерениям Жилинского. Сам художник вспоминал: «Где-то в начале шестидесятых годов мой друг Альберт Папикян подарил мне темпера, сказав: „По-моему, — это твой материал“». Дмитрий Жилинский обычно использовал не

Инверторът е електрическа схема, която превръща еднократно електрическата енергия с постоянно напрежение в променливо (DC-AC). Инверторът не произвежда никаква мощност, а само променя параметрите на електрическата енергия и я преобразува в енергия необходима за ползване в бита или за захранване на специализирана апаратура и промишлени инсталации. Конструкцията на всеки инвертор се произвежда за конкретно входно постоянно напрежение и за изходно напрежение с точно определени параметри като големина на напрежение, честота, форма на сигнала и мощност.

Фински залив релативно је плитки залив на крајњем истоку акваторије Балтичког мора, на подручју северне Европе. Ограничен је јужном обалом Финске на северу, северном обалом Естоније на југу, те територијама Лењинградске области и Санкт Петербурга у Русији на истоку. Према подацима Међународне хидрографске организације западна граница залива иде до линије која повезује острво Осмусар на југу са полуострвом Ханко на северу. Површина акваторије Финског залива је приближно око 30.000 km², максимална дужина у смеру исток-запад је до 420 km, а ширина до 130 km. Просечна дубина залива је око 38 метара. Преко Сајменског канала повезан је са језерским

Αντίθετα με αυτό που θεωρεί η πλειοψηφία, το Lorem Ipsum δεν είναι απλά ένα τυχαίο κείμενο. Οι ρίζες του βρίσκονται σε ένα κείμενο Λατινικής λογοτεχνίας του 45 π.Χ., φτάνοντας την ηλικία του πάνω από 2000 έτη. Ο Richard McClintock, καθηγητής Λατινικών στο κολλέγιο Hampden-Dydney στην Βιρτζίνια, αναζήτησε μία από τις πιο σπάνιες Λατινικές λέξεις, την consectetur, από ένα απόσπασμα του Lorem Ipsum, και ανάμεσα σε όλα τα έργα της κλασσικής λογοτεχνίας, ανακάλυψε την αναμφισβήτητη πηγή του. Το Lorem Ipsum προέρχεται από τις ενότητες 1.10.32 και 1.10.33 του "de Finibus Bonorum et Malorum" (Τα άκρα του καλού και του κακού) από τον Cicero (Σισερό), γραμμένο το 45 π.Χ. Αυτό το βιβλίο είναι μία διατριβή στην θεωρία της Ηθικής, πολύ δημοφιλής κατά την αναγέννηση. Η πρώτη γραμμή του Lor-
