Un problema aún mayor radica en que el planeta no tiene superficie sólida sobre la que aterrizar, ya que debido a su composición gaseosa, hay una suave transición desde su atmósfera y su fluido interior. Cualquier sonda espacial que descendiera por la atmósfera, sería finalmente destruida por la inmensa presión. Otro problema es la cantidad de radiación a la que es expuesta una sonda que llega al planeta, dadas las duras cargas de partículas del entorno alrededor de Júpiter. Por ejemplo, la sonda Galileo lo ha orbitado durante varios años y ha excedido notablemente la cantidad de radiación para la cual fue diseñada. Como resultado de ello, ha sufrido diversos problemas técnicos y fallos atribuidos a los efectos de

Née le 8 mai 1910 à Atlanta, Mary Lou Williams grandit dans un milieu familial compliqué. Galileu Galilei desenvolveu os primeiros estudos sistemáticos do movimento uniformemente acelerado e do movimento do pêndulo. Descobriu a lei dos corpos e enunciou o princípio da inércia e o conceito de referencial inercial, ideias precursoras da mecânica newtoniana. Galileu melhorou significativamente o telescópio refrator e com ele descobriu as manchas solares, as montanhas da Lua, as fases de Vénus, quatro dos satélites de Júpiter, os anéis de Saturno, as estrelas da Via Láctea. Estas descobertas contribuíram decisivamente na defesa do heliocentrismo. Contudo a principal contribuição de Galileu foi para o método científico, pois a ciência assentava numa metodologia aristotélica.

Antilopka pižmová může mít jako druh různé, ale u každého jedince jednotné, zbarvení, jetž se pohybuje od šedé po kaštanovou. Směrem dolů barva bledne a spodek těla je pak již plně bílý. Suni patří mezi nejmenší druhy antilop, na výšku měří 33 až 35 cm a na délku asi 57 až 62 cm bez ocasu. Živí se převážně spadány listy rostlin. Žije spíše samotářsky a vykazuje teritorialitu, své malé území si samci i samice hájí před jedinci stejného pohlaví, území samců a samic se však mohou překrývat. Rozmnožování může probíhat celoročně, samici se rodí obyčejně jedno mládě, jež schovává ve vysoké trávě. Jeho vývoj je rychlý a za tři dny již konzumuje pevnou stravu. Pohlavní dospělosti dosahuje za 6 až 18 měsíců.

Kondor D6 stanowił kolejną konstrukcję inżyniera Waltera Rethela, jaka powstała w zakładach Kondor Flugzeugwerke w Essen po modelach D1 i D2. W przeciwieństwie do poprzednich samolotów o konstrukcji drewnianej, kadłub D6 tworzyła kratownica z rurek stalowych, pokryta płótnem. Rewolucyjnym i niewystępującym w innych konstrukcjach pomysłem było także zastosowanie podziału górnego płata, który składał się z dwóch oddzielnych połówek, oddalonych od siebie o około 0,9 metra, zamocowanych do kadłuba i połączonych z płatem dolnym za pomocą rozchylonych na zewnątrz rozpórek i zastrzałów Całkowite usunięcie baldachimu miało na celu radykalną poprawę widoczności w przód i do góry.

В 1961 году художник совершил поездку в Италию, где изучал живопись эпохи Возрождения. Большое впечатление произвели на него работы Джотто и Паоло Уччелло. Работая над этой картиной, Жилинский впервые использовал новую для себя технику — темпера. Традиции техники темперной живописи по левкасу на древесно-стружечной плите восходят к византийскому и древнерусскому искусству, частично — к произведениям старых европейских мастеров. Техника масляной живописи перестала отвечать намерениям Жилинского. Сам художник вспоминал: «Где-то в начале шестидесятых годов мой друг Альберт Папикян подарил мне темпера, сказав: „По-моему, — это твой материал“». Дмитрий Жилинский обычно использовал не деревянные

Инверторът е електрическа схема, която превръща еднократно електрическата енергия с постоянно напрежение в променливо (DC-AC). Инверторът не произвежда никаква мощност, а само променя параметрите на електрическата енергия и я преобразува в енергия необходима за ползване в бита или за хранене на специализирана апаратура и промишлени инсталации. Конструкцията на всеки инвертор се произвежда за конкретно входно постоянно напрежение и за изходно напрежение с точно определени параметри като големина на напрежение, честота, форма на сигнала и мощност.
